About me

Site Reliability and Infrastructure Engineer experienced in CI/CD automation, deployment engineering, observability, and production support for large-scale customer-facing systems. Skilled in Linux environments, automation, containerization, and developer tooling with growing focus on cloud-native infrastructure and Kubernetes platforms. Passionate about reliability, operational efficiency, and infrastructure automation.

Professional Experience

Hapag-Lloyd AG

Gdańsk, Poland

FIS SITE RELIABILITY ENGINEER

Mar. 2025 — Present

- **Modernized legacy workflows:** Replaced GUI-driven deployment processes for mainframe-hosted Freight Information System (FIS) applications with Bash-based automation via UrbanCode Deploy, significantly improving maintainability.
- **Enhanced system observability:** Troubleshoot production reliability issues across distributed and legacy infrastructure using Datadog, Grafana, and ELK stack for deep log analysis and operational visibility.
- **Collaborative CI/CD support:** Maintained and optimized critical operational workflows using Jenkins and GitLab in close alignment with development and platform teams.
- **Cross-functional alignment:** Collaborated across development, database, and observability squads to support high-availability customer shipping and booking systems.

Intel Technology Poland

Gdańsk, Poland

INFRASTRUCTURE AND DEVOPS ENGINEER

Jul. 2022 — Dec. 2024

- **Scalable CI Infrastructure:** Architected and configured hybrid (Linux/Windows) self-hosted GitHub Actions runners and CI workflows to automate build/test processes and maximize resource utilization.
- **Pipeline Security & Stability:** Implemented Docker containerization across pipelines to ensure consistent environments and integrated Coverity static analysis gates to enforce code quality.
- **Knowledge Sharing & Docs:** Conducted technical training sessions on static analysis tools and CI/CD best practices while maintaining extensive documentation to accelerate team onboarding.

Intel Technology Poland

Gdańsk, Poland

SOFTWARE DEVELOPMENT INTERN

Mar. 2020 — Jun. 2022

- **Legacy Migration:** Successfully migrated over 30 source code repositories from TeamForge to GitHub while maintaining complete code integrity.
- **Build System Optimization:** Designed and maintained Jenkins CI pipelines, optimizing internal tool build systems to boost efficiency and reliability.
- **Team Enablement:** Conducted introductory Git/GitHub training sessions for development teams to improve version control adoption and contributed to internal tool development.

Education

GUT (Gdansk University of Technology)

Gdańsk, Poland

M.Sc. IN INFORMATICS

Mar. 2021 — Jun. 2022

- Thesis: Programming the front end applications with ELM language

GUT (Gdansk University of Technology)

Gdańsk, Poland

B.Sc. IN INFORMATICS

Oct. 2017 — Feb. 2021

- Thesis: Distributed Online Judging System

Technical Skills

Cloud & Infrastructure

Linux, Kubernetes, Docker, Podman, AWS (EC2, ECS, VPC), IBM Mainframe

CI/CD & Automation

GitHub Actions, Jenkins, GitLab CI, FluxCD, Python, Bash, Ansible, UrbanCode Deploy

Observability & Monitoring

Grafana, Prometheus, Loki, ELK Stack, Datadog

Security & Code Quality

Snyk, Trivy, SonarQube, Coverity, Checkmarx

Networking & Web Infrastructure

Traefik, DNS, HTTPS/TLS, Reverse Proxies

Development & Operating Systems

Python, Bash, C/C++, Linux Troubleshooting, Performance Analysis, Vim

Honors & Awards

2019 **1st place**, Zombathon - for building ToyShare application

Gdańsk, Poland

Hackathon organized by Aspire Systems and the GUT's .NET Group
